

Award for successful engineering achievement:

In 2021 the SPW GmbH again receives the renowned DNV-GL-Certificate for feathering Propellers.

The audit of the models VARIPROFILE and VARIPROP was held according to strict guidelines. SPW GmbH is currently the only producer of feathering Propellers worldwide holding this type approval.

Bremerhaven, March 2021: On February 17th, 2021 SPW GmbH again received the DNV-GL certificate. With the seal of approval from the world's leading classification society DNV-GL, the high safety and quality awareness of the company is valued. It stands out in the planning and development of its feathering propeller models **VARIPROFILE** and **VARIPROP**.

The DNV-GL-certificate is related to the following classifications:

- DNV GL rules for classification – Ships
- DNV GL rules for classification – Yachts
- DNV GL rules for classification – High speed and light craft

As part of the audit, all technical components of the two feathering propellers VARIPROFILE and VARIPROP were appraised. This was implemented according to strict guidelines and down to the smallest detail. In the run-up to the event, SPW GmbH had concentrated on meeting the DNV-GL assessment criteria to flow into their constructions. In order to succeed the used components were subjected to intensive load controls.

The new DNV-GL award is proof of this successful engineering achievement – and unique worldwide. SPW GmbH is currently the only manufacturer of feathering propellers who received the renowned DNV-GL type approval.

SPW CEO Claudia Adamczyk is satisfied by this unique confirmation:

“

We are very proud of achieving this certificate. We knew that the DNV-GL quality standard is now formulated extremely strict. Our ambitions were accordingly high. It was definitely worth the time and effort we invested into the calculation and manufacturing. Our customers receive the precision work they know and expect, and now as another benefit: certified security.”

”
