

VARIPROP GP-128: New model for sailing yachts in the SPW feathering propeller range.

Bremerhaven, October 2023. SPW GmbH, renowned manufacturer and supplier of highly specialised propeller and propulsion technology for sailing and motor yachts, is pleased to announce the launch of its latest product, the VARIPROP GP-128. This innovative model complements the product portfolio and aims to optimise the efficiency and performance of sailing yachts to meet the increasing needs of owners.

The **VARIPROP GP-128** occupies a significant position between the already established **VARIPROP GP- 112** and **VARIPROP GP-140** models. This new model offers more attractive pricing for these installations in the VARIPROP product range.

This model, the **VARIPROP GP-128**, has also been designed with the new very effective and quiet Gawn profile blades. This type of blade is known for its efficiency, performance and thus CO2 reduction.

The **VARIPROP GP-128** is available in 3-blade and 4-blade versions and is suitable for the new SAILDRIVE ZF 15, developed by ZF Hurth for machines up to 113 kW, as well as for all shaft installations. The VARIPROP GP-128 is available from 21" (533 mm) to 25" (635 mm). This versatility makes it an outstanding choice for sailing yachts weighing up to 28 tonnes and with a maximum power of 120 kW.

„With the VARIPROP GP-128, we are continuing our course of innovation to meet the needs of owners of modern yachts,“ explains Claudia Adamczyk, Managing Director of SPW GmbH. „This new model enables us to also do justice to yachts with the modern new SD 15 saildrive from ZF, which has been designed for significantly higher performance. This means that we can also equip these yachts with optimum drive technology and thus increase efficiency and sustainability in water sports.“

As a standard installation, the **VARIPROP GP-128** is also offered on Solé engines with outputs of 80 and 90 kW with the SD 15, among others. However, this model is suitable for any other motorisation and for yachts with shaft systems for the significantly improved sailing characteristics and excellent manoeuvrability of the vessels.

The **VARIPROP GP-128** is available immediately from October 2023 both from SPW in Bremerhaven and from all authorised SPW GmbH dealers worldwide.
